the concept behind this book is to take a holistic view of food texture starting with the determination of food texture its perception in the mouth and its measurement by both sensory and instrumental methods and to examine the relation between them the book has been divided into four sections fundamentals sensory and human interactions instrumental analysis and food products essentially we cover the techniques

used for measuring food texture and then apply them to the different product groups readers of the first edition will notice the title has changed with the adoption of the term texturology in the long history of food texture research texturology has been occasionally used in literature the term texturology has not been widely accepted by texture researchers texturologists because of their concern over whether the theories and techniques are broad and strong enough to support texture research as a scientific discipline during the 24 years since the publication of the first edition the editors have observed vast developments in theories as well as the assessment methodology of food texture both sensory and instrumental and these have shaped our understanding this second edition brings the science up to date by introducing topics not previously covered e g psychophysics tribology oral processing texture maps and special foods for dysphagia patients it includes an exposé of the instruments to measure food texture and also considers techniques for measuring consumer perception of food texture in addition to the sensory properties additionally it amends omissions from the first edition such as dairy products fish bakery products and sugar confectionery asproduct groups all in all it is expanded and updated in its coverage of food texturology as a coherent scientific discipline
