digital learning is enabling new and innovative approaches to learning in different domains the rapid development of technology makes digital learning ubiquitous and offers more self directed ways of learning however digital learning also comes with disadvantages such as poor learning outcomes that have to be addressed systematically a promising approach is to put the understanding and scaffolded design of digital learning processes at the center andreas janson presents approaches for scaffolding digital learning processes for the domains of higher education and vocational training these approaches are based on a holistic understanding of learning processes in digital environments the empirical evaluations show that learning processes are critical for learning outcomes in digital environments finally the results from field experiments show that the scaffolding of a digital learning process enables for better learning outcomes the book targets researchers lecturers and students in information systems business administration and educational technology the book provides insights for practitioners concerned with the development of education and training

this monograph illuminates a design mindset for systems artefacts that not only survive but thrive of itself an artefact is devoid of design quality until encountered in a specific social context by human attendants design quality is the affect of an intertwining of a an artefact s structural and behavior properties b an attendant humanly conception of quality an appreciative system and c the enfolding social context of their encounter to pursue quality in design is to interweave these three strands bound as a durable cord that evokes a visceral satisfaction or the delight of a ringing musical chord the human consciousness of design quality is fundamentally metaphoric and dynamic a perception of reality mediated by a personal value disposition in the continuum of experience living moment after moment both the attendant s metaphorical appreciation and their sense of quality evolve and thus design quality issues from perpetual concentric cycles of design construct experience learn assess calibrate over the life span of relationship with an artefact design as a verb s purpose is to service the life in that relationship sustain its survival and hopefully raise that life to a state of thriving design quality manifests throughout the cycles of design as a verb rather than as a product of it such is the mindset in which the designer must indwell and that design education must nurture while all artefacts are systems the domain of artefact design of which i am most experienced is computing systems therefore i will rest upon that domain to explore a theory and practice of design as a verb designing thriving systems
