tractors are the most important pieces of
agricultural mechanization hence a key factor of
feeding the world in order to address the
educational needs of both less and more developed
countries the author included fundamentals of
simple but proved designs for tractors with
moderate technical levels along with extensive
information concerning modern premium tractors the
broad technical content has been structured
according to five technology levels addressing all
components relevant iso standards are considered
in all chapters the book covers historical
highlights tractor project management including
cost management traction mechanics tires including
inflation control belt ground drives and ride
dynamics further topics are chassis design diesel
engines with emission limits and installation
instructions all important types of transmissions
topics in machine element design and human factors
health safety comfort moreover the content covers
tractor implement management systems in particular
isobus automation and hydraulic systems cumulative
damage fundamentals and tractor load spectra are
described and implemented for dimensioning and
design verification fundamentals of energy
efficiency are discussed for single tractor
components and solutions to reduce the tractor co2
footprint are suggested

Diesel Progress, Incorporating Gas Turbine
