file format wikipedia

Dec 24 2023

file format is a standard for describing the format of a file. It is used to identify the type of data stored in a file and to determine how the data should be processed. The format is often specified in a file extension or a file type. The format is also used to determine the encoding of the data. The format is often specified in a file extension or a file type. The format is also used to determine the encoding of the data.
