Filtrations on the Homology of Algebraic Varieties 1994 this work provides a detailed exposition of a classical topic from a very recent viewpoint friedlander and mazur describe some foundational aspects of lawson homology for complex projective algebraic varieties a homology theory defined in terms of homotopy groups of spaces of algebraic cycles attention is paid to methods of group completing abelian topological monoids the authors study properties of chow varieties especially in connection with algebraic correspondences relating algebraic varieties operations on lawson homology are introduced and analyzed these operations lead to a filtration on the singular homology of algebraic varieties which is identified in terms of correspondences and related to classical filtrations of hodge and grothendieck

The South African Builder 2014-07-14 the present volume represents a selection of papers presented at the international symposium on ideophones held in january 1999 in st augustin germany they center around the following hypotheses ideophones are universal and constitute a grammatical category in all languages of the world ideophones and similar words have a special dramaturgic function that differs from all other word classes they simulate an event an emotion a perception through language in addition to this unique function a good number of formal parallels can be observed the languages dealt with here display strikingly similar patterns of derivational processes involving ideophones an equally widespread common feature is the introduction of ideophones via a verbum dicendi or complementizer another observation concerns the sound symbolic behavior of ideophones thus the word formation of ideophones differs from other words in their tendency for iconicity and sound symbolism finally it is made clear that ideophones are part of spoken language the language register where gestures are used rather than written language
