this book is the product of an important collaboration between clinicians of the manual therapies and scientists in several disciplines that grew out of the three recent international fascia research congresses boston amsterdam and vancouver the book editors thomas findley md phd robert schleip phd peter huijing phd and leon chaitow do were major organizers of these congresses and used their extensive experience to select chapters and contributors for this book this volume therefore brings together contributors from diverse backgrounds who share the desire to bridge the gap between theory and practice in our current knowledge of the fascia and goes beyond the 2007 2009 and 2012 congresses to define the state of the art from both the clinical and scientific perspective prepared by over 100 specialists and researchers from throughout the world fascia the tensional network of the human body will be ideal for all professionals who have an interest in fascia and human movement physiotherapists osteopathic physicians osteopaths chiropractors structural integration practitioners manual therapists massage therapists acupuncturists yoga or pilates instructors exercise scientists and personal trainers as well as physicians involved with musculoskeletal medicine pain management and rehabilitation and basic scientists working in the field reflects the efforts of almost 100 scientists and clinicians from throughout the world offers comprehensive coverage ranging from anatomy and physiology clinical conditions and associated therapies to recently developed research techniques explores the role of fascia as a bodywide communication system presents the latest information available on myofascial force transmission which helps establish a scientific basis for given clinical experiences explores the importance of fascia as a sensory organ for example its important proprioceptive and nociceptive functions which have implications for the generation of low back pain describes new imaging methods which confirm the connectivity of org

need for information about the properties of fascia particularly for osteopaths massage therapists physiotherapists and other complementary health care professionals offers new insights on the fascial related foundations of traditional chinese medicine meridians and the fascial effects of acupuncture

# RETI MARITTIME COME FATTORI DELL'INTEGRAZIONE EUROPEA MARITIME NETWORKS AS A FACTOR IN EUROPEAN INTEGRATION 2019

this book is a tribute to professor pedro gil who created the department of statistics or and tm at the university of oviedo and a former president of the spanish society of statistics and or seio in more than eighty original contributions it illustrates the extent to which mathematics can help manage uncertainty a factor that is inherent to real life today it goes without saying that in order to model experiments and systems and to analyze related outcomes and data it is necessary to consider formal ideas and develop scientific approaches and techniques for dealing with uncertainty mathematics is crucial in this endeavor as this book demonstrates as professor pedro gil highlighted twenty years ago there are several well known mathematical branches for this purpose including mathematics of chance probability and statistics mathematics of communication information theory and mathematics of imprecision fuzzy sets theory and others these branches often intertwine since different sources of uncertainty can coexist and they are not exhaustive while most of the papers presented here address the three aforementioned fields some hail from other mathematical disciplines such as operations research others in turn put the spotlight on real world studies and applications the intended audience of this book is mainly statisticians mathematicians and computer scientists but practitioners in these areas will certainly also find the book a very interesting read

#### Fascia: The Tensional Network of the Human Body - E-Book 2013-02-26

based on graph theory studies this book seeks to understand how tropical species interact with each other and how these interactions are affected by perturbations in some of the most species rich habitats on earth due to the great diversity of species and interactions in the tropics this book addresses a wide range of current and future issues with empirical examples and complete revisions on different types of ecological networks from mutualisms to antagonisms the goal of this publication is not to be only for researchers but also for undergraduates in different areas of knowledge and also to serve as a reference text for graduate level courses mainly in the
