an accessible introduction to the sociology of the body a field previously dominated by theoretical or philosophical accounts the body plays a central role in shaping our experience of the world why then are we so frequently oblivious to our own bodies we gaze at the world but rarely see our own eyes we may be unable to explain how we perform the simplest of acts we are even less aware of our internal organs and the physiological processes that keep us alive in this fascinating work drew leder examines all the ways in which the body is absent forgotten alien uncontrollable obscured in part 1 leder explores a wide range of bodily functions with an eye to structures of concealment and alienation he discusses not only perception and movement skills and tools but a variety of bodies that philosophers tend to overlook the inner body with its anonymous rhythms the sleeping body into which we nightly lapse the prenatal body from which we first came to be leder thereby seeks to challenge primacy of perception in part 2 leder shows how this phenomenology allows us to rethink traditional concepts of mind and body leder argues that cartesian dualism exhibits an abiding power because it draws upon life world experiences descartes corpus is filled with disruptive bodies which can only be subdued by exercising disembodied reason leder explores the origins of this notion of reason as disembodied focusing upon the hidden corporeality of language and thought in a final chapter leder then proposes a new ethic of embodiment to carry us beyond cartesianism this original important and

accessible work uses examples from the author's medical training throughout it will interest all those concerned with phenomenology the philosophy of mind or the cartesian tradition those working in the health care professions and all those fascinated by the human body a theoretically sophisticated and cross disciplinary reader in the anthropology of the body how to make the body difference identity and embodiment brings together contemporary and historical readings of the body exploring the insights and limits of established and emerging theories of difference identity and embodiment in a variety of german contexts the engaging contributions to this volume utilize and challenge cutting edge approaches to scholarship on the body by putting these approaches in direct conversation with canonical texts and objects as well as with lesser known yet provocative emerging forms to these ends the chapter authors investigate the body through detailed studies across a wide variety of disciplines and modes of expression from advertising aesthetics and pornography to social media scientific experimentation and transnational cultural forms thus this volume showcases the ways in which the body as such cannot be taken for granted and surmises that the body continues to undergo constant and potentially disruptive diversification and transformation establishes the body's undeniable presence and strangeness as the material out of which human beings are made the body and experiences of embodiment have generated a rich and diverse

sociological literature this volume articulates and illustrates one major approach to the sociology of the body symbolic interactionism an increasingly prevalent theoretical base of contemporary sociology derived from the pragmatism of writers such as john dewey william james charles peirce charles cooley and george herbert mead the authors argue that from an interactionist perspective the body is much more than a tangible corporeal object it is a vessel of great significance to the individual and society from this perspective body self and social interaction are intimately interrelated and constantly reconfigured the collection constitutes a unique anthology of empirical research on the body from health and illness to sexuality from beauty and imagery to bodily performance in sport and art and from mediated communication to plastic surgery the contributions are informed by innovative interactionist theory offering fresh insights into one of the fastest growing sub disciplines of sociology and cultural studies

the body plays a central role in shaping our experience of the world why then are we so frequently oblivious to our own bodies we gaze at the world but rarely see our own eyes we may be unable to explain how we perform the simplest of acts we are even less aware of our internal organs and the physiological processes that keep us alive in this fascinating work drew leder examines all the ways in which the body is absent forgotten alien uncontrollable obscured in part 1 leder explores a wide range of bodily functions with an eye to structures of concealment and alienation he discusses not only perception and movement skills and tools but a variety of bodies that philosophers tend to overlook the inner body with its anonymous rhythms the sleeping body into which we nightly lapse the prenatal body from which we first came to be leder thereby seeks to challenge primacy of perception in part 2 leder shows how this phenomenology allows us to rethink traditional concepts of mind and body leder argues that cartesian dualism exhibits an abiding power because it draws upon life world experiences descartes corpus is filled with disruptive bodies which can only be subdued by exercising disembodied reason leder explores the origins of this notion of

reason as disembodied focusing upon the hidden corporeality of language and thought in a final chapter leder then proposes a new ethic of embodiment to carry us beyond cartesianism this original important and accessible work uses examples from the author s medical training throughout it will interest all those concerned with phenomenology the philosophy of mind or the cartesian tradition those working in the health care professions and all those fascinated by the human body

how to make the body difference identity and embodiment brings together contemporary and historical readings of the body exploring the insights and limits of established and emerging theories of difference identity and embodiment in a variety of german contexts the engaging contributions to this volume utilize and challenge cutting edge approaches to scholarship on the body by putting these

approaches in direct conversation with canonical texts and objects as well as with lesser known yet provocative emerging forms to these ends the chapter authors investigate the body through detailed studies across a wide variety of disciplines and modes of expression from advertising aesthetics and pornography to social media scientific experimentation and transnational cultural forms thus this volume showcases the ways in which the body as such cannot be taken for granted and surmises that the body continues to undergo constant and potentially disruptive diversification and transformation

the body and experiences of embodiment have generated a rich and diverse sociological literature this volume articulates and illustrates one major approach to the sociology of the body symbolic interactionism an increasingly prevalent theoretical base of contemporary sociology derived from the pragmatism of writers such as john dewey william james charles peirce charles cooley and george herbert mead the authors argue that from an interactionist perspective the body is much more than a tangible corporeal object it is a vessel of great significance to the individual and society from this perspective body self and social interaction are intimately interrelated and constantly reconfigured the collection constitutes a unique anthology of empirical research on the body from health and illness to sexuality from beauty and imagery to bodily performance in sport and art and from mediated communication to plastic surgery the contributions are informed by innovative interactionist theory offering fresh insights into one of the fastest growing sub disciplines of sociology and cultural studies
