2020 from cover to cover but englishman henry gray was late in the field and never saw the enduring success of his famous work having first published the surgeon
s reference book in 1858 he died in 1861 after contracting smallpox from his nephew who survived he was just 34 gray was following on from a long tradition of
anatomists starting with aristotle and galen whose competing theories about the human body dominated early medicine however they did not have the illustrative
skills of leonardo da vinci who was trained in anatomy by andrea del verrocchio in 1489 leonardo began a series of anatomical drawings depicting the human form
his surviving 750 drawings from two decades represent groundbreaking studies in anatomy however none of leonardo s notebooks were published during his
lifetime they only appeared in print centuries after his death brussels born andries van wesel andreas vesalius professor at the university of padua is deemed to be
the founder of modern anatomical reference with his 1543 work de humani corporis fabrica libri septem on the fabric of the human body in seven books an italian
contemporary was bartolomeo eustachi who supported galen s medical theories among other discoveries he correctly identified the eustachian tube and the
arrangement of bones in the inner ear his anatomical engravings were completed in 1552 nine years after vesalius s great work but remained unpublished until
1714 these are just two entries in a book brimming with an abundance of important illustrated works with some more primitive examples from the 15th century up
to the 42nd edition of gray s in the 21st
