unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

the subject of tensor analysis deals with the problem of the formulation of the relation between various entities in forms which remain invariant when we pass from one system of coordinates to another the invariant form of equation is necessarily related to the possible system of coordinates with reference to which the equation remains invariant the primary purpose of this book is the study of the invariance form of equation relative to the totally of the rectangular co ordinate system in the three dimensional euclidean space we start with the consideration of the way the sets representing various entities are transformed when we pass from one system of rectangular co ordinates to another a tensor may be a physical entity that can be described as a tensor only with respect to the manner of its representation by means of multi sux sets associated with different system of axes such that the sets associated with different system of co ordinate obey the transformation law for tensor we have employed sux notation for tensors of any order we could also employ single letter such a b to denote tensors

the third annual international industrialization symposium on the supercollider iissc held march 13 15 1991 in atlanta ga was an enormous success the number of attendees exhibitors and representatives from foreign countries surpassed the totals of previous years there were 740 attendees representing more than 2 dozen universities and colleges 32 states 9 national labs 6 research centers several government entities at the local state and federal level 182 businesses industry and 14 countries more than 100 exhibits sponsored by 85 organizations added to the excitement getting down to business was the theme of this year s symposium the fact that the superconducting supercollider ssc is indeed underway was the message delivered by the symposium s keynote speaker dr roy schwitters and expanded upon by the opening plenary speakers the project is moving from the planning stage to actual construction to development and procurement of equipment and to resolution of the technical issues involved in advancing the state of the art in areas such as theory controls systems metallurgy quality control management cryogenics power systems detectors interagency cooperation and funding plenary speakers included paul gilbert chairman of parsons brinckerhoff quade douglas inc

la physique des réacteurs nucléaires est le premier ouvrage français conçu pour aborder de façon progressive et détaillée la complexité théorique du comportement des neutrons en situation sûre ou accidentelle fruit de l'expérience pédagogique de l'auteur et de son expertise internationale reconnue en sûreté nucléaire il est rapidement devenu un ouvrage de référence au sein de la communauté nucléaire française après des rappels de physique nucléaire replaçant les notions théoriques dans leur contexte historique l'auteur expose les théories mathématiques physiques les plus récentes concernant le ralentissement des neutrons dans la matière les particules chargées et les rayonnements électromagnétiques les phases de calcul en soulignant les hypothèses simplificatrices le concept de criticité lorsque se développe et se maintient une réaction nucléaire en chaîne le calcul théorique des réacteurs homogènes et hétérogènes les problèmes d'autoprotection les méthodes numériques des 2 approches historiques du traitement des neutrons transport neutronique et diffusion cette 2e édition revue et augmentée approfondit certaines notions notamment le spectre théorique de fission l'effet des liaisons cristallines l'effet de la hétérogénéité du champ de température l'effet d'anderson les équations du transport en géométrie dimensionnelle le calcul du facteur anti trappe la méthode des neutrons pulsés l'effet d'ombre de l'intégrale de résonance la méthode feynman a le traitement des instrumentations de l'epr complété par plus de 400 références bibliographiques dont de nombreuses commentées et une annexe replaçant les travaux d'edf dans le contexte national du développement de l'énergie nucléaire cet ensemble constitue la référence théorique la plus complète en neutronique cet ouvrage est conforme aux enseignements de l'institut de transfert de technologie d'edf et sert de référentiel aux enseignements de l'École nationale supérieure d'ingénieurs de bordeaux insa centre val de loire il a été conçu pour les ingénieurs et techniciens sur sites souhaitant enrichir leur propre expertise pour les étudiants de 3e cycle et les élèves ingénieurs en sciences énergétiques
