2008-10-03

the role of discursive power in shaping international relations analyzed through the lens of whaling politics in the second half of the twentieth century worldwide attitudes toward whaling shifted from widespread acceptance to moral censure why whaling once as important to the global economy as oil is now had long been uneconomical major species were long known to be endangered yet nations had continued to support whaling in the power of words in international relations charlotte epstein argues that the change was brought about not by changing material interests but by a powerful anti whaling discourse that successfully recast whales as extraordinary and intelligent endangered mammals that needed to be saved epstein views whaling both as an object of analysis in its own right and as a lens for examining discursive power and how language materiality and action interact to shape international relations by focusing on discourse she develops an approach to the study of agency and the construction of interests that brings non state actors and individuals into the analysis of international politics epstein analyzes the society of whaling states as a set of historical practices where the dominant discourse of the day legitimated the killing of whales rather than their protection she then looks at this whaling world s mirror image the rise from the political margins of an anti whaling discourse which orchestrated one of the first successful global environmental campaigns in which saving the whales ultimately became shorthand for saving the planet finally she considers the continued dominance of a now taken for granted anti whaling discourse including its creation of identity categories that align with and sustain the existing international political order epstein s synthesis of discourse power and identity politics brings the fields of international relations theory and global environmental politics into a fruitful dialogue that benefits both

repositions bachelard as a critical and integral part of contemporary continental philosophy like schelling before him and deleuze and guattari after him gaston bachelard made major philosophical contributions to the advancement of science and the arts in addition to being a mathematician and epistemologist whose influential work in the philosophy of science is still being absorbed bachelard was also one of the most innovative thinkers on poetic creativity and its ethical implications his approaches to literature and the arts by way of elemental reverie awakened long buried modes of thinking that have inspired literary critics depth psychologists poets and artists alike bachelard s extraordinary body of work unduly neglected by the english language reception of continental philosophy in recent decades exhibits a

capacity to speak to the full complexity and wider reaches of human thinking the essays in this volume analyze bachelard as a phenomenological thinker and situate his thought within the western tradition considering his work alongside that of schelling husserl bergson buber heidegger merleau ponty gadamer deleuze and nancy this collection highlights some of bachelard s most provocative proposals on questions of ontology hermeneutics ethics environmental politics spirituality and the possibilities they offer for productive transformations of self and world
