La vera scienza è l'idealismo assoluto

1872

this book examines in detail the clinical implications of those diseases that either are primarily triggered by air pollution or represent direct consequences of air pollutants the aim is to provide medical practitioners with practical solutions to issues in diagnosis and treatment while simultaneously furnishing other interested parties with crucial information on the field the book introduces the concept that air pollution related diseases constitute a new class of pathologies a wide range of conditions mainly attributable to air pollution are discussed covering different body systems and pollution impacts in subsets of the population in addition to presenting state of the art overviews of clinical aspects the book carefully examines the implications of current knowledge for social and public health strategies aimed at disease prevention and prophylaxis the clinical handbook of air pollution related diseases will greatly assist doctors and healthcare workers when dealing with the consequences of air pollution in

their everyday practice and will provide researchers industry and policymakers with valuable facts and insights

Current Catalog

1970

this edited collection provides the first comprehensive history of florence as the mid 19th century capital of the fledgling italian nation covering various aspects of politics economics culture and society this book examines the impact that the short lived experience of becoming the political and administrative centre of the kingdom of italy had on the tuscan city both immediately and in the years that followed it reflects upon the urbanising changes that affected the appearance of the city and the introduction of various economic and cultural innovations the volume also analyses the crisis caused by the eventual relocation of the capital to rome and the subsequent bankruptcy of the communality which hampered florence on the long road to modernity florence capital of the kingdom of italy 1865 71 is a fascinating study for all students and scholars of modern italian history

older ones the book concludes with the decline of italian universities as internal abuses and external threats including increased student violence and competition from religious schools ended italy s educational leadership in the seventeenth century

Proponimento della scienza e sua utilita e diletto discorso per servire d'introduzione alla enciclopedia popolare che si pubblica in Inghilterra di lord Brougham

1836

this is a timely volume in view of the considerable interest currently shown in the preservation of our cultural heritage and the extensive and growing literature on the subject unfortunately the latter is to be found in a wide variety of published sources some aimed at a very specific readership and therefore not all that accessible to those who need this resource the present volume draws together a spectrum of biodeterioration work from across the world to provide an overview of the materials examined and the methodologies employed to elucidate the nature of the problems as well as an extensive and current bibliographical resource on lichen biodeterioration biodeterioration of historical and culturally important stone substrata is a complex problem to be addressed easy risk free solutions are simply not available to be dealt with by other than a wide range of expertise successful resolution of this issue will inevitably require a multidisciplinary effort where biologists work in close cooperation with ecologists geologists geochemists crystallographers cultural property conservators archaeologists anthropologists and historians in order to recommend the most effective management scheme the advantage of this approach is obvious multidisciplinary management teams with good leadership can ask more appropriate questions while developing much more thoughtful and informed decisions

this volume propose several answers to the following question to what do we refer when we speak of central european philosophy interpretations of central european philosophy have developed in at least two broad directions an interpretation fashionable during the 1970s lumps specific philosophical achievements especially those of mach and wittgenstein characterized by research into and development of new languages of new philosophical scientific and artistic grammars in this situation literature was seen as the exploration of meanings moving towards frontiers in which reality and possibility science and metaphor meet and merge on the other hands the theme of a central european philosophy connected with but independent of literature has recently been given more thorough development the two outstanding figures to have emerged from this inquiry are those of bernard bolzano and franz brentano with reference to brentano in particular it is almost as if the collapse of the empire also erased awareness of the common origin of many diverse components of central european philosophical and scientific thought the polish logical school logical neopositivism phenomenology the prague school of linguistics analytic philosophy gestalt psychology the vienna economics school as well as a number of individual thinkers are all movements and groups connected in some manner with brentano s work and teaching although in some respects these are movements still at the centre of interest the overall effect the pattern of their common and unifying aspects have been neglected if they have not entirely disappeared it seems that the unity of this philosophical tradition was lost with the end of the geographical and political unity of the danubian empire and with the events that accompanied its downfall after 1918 the centres of that tradition vienna prague lvov graz belonged to different states and its rich network of exchanges contacts and relationships was dismantled forever however there still remained something of its philosophical style in each individual school traits which enable us to speak as the authors have done in this volume of central european philosophy
