twenty years as an outsider scouring the underbelly of american culture has made howard hampton a uniquely hard nosed guide to the heart of pop darkness bridging the fatalistic intensely charged space between apocalypse now redux and nirvana s smells like teen spirit his writing breaks down barriers of ignorance and arrogance that have segregated art forms from each other and often from the world at large in the freewheeling spirit of pauline kael lester bangs and manny farber hampton calls up the extremist underground tendencies and archaic forces simmering beneath the surface of popular forms ranging from the kinetic poetry of hong kong cinema and the neo new wave energy of irma vep to the punk heroines of sleater kinney and ghost world born in flames plays odd couples off one another pitting natural born killers against

forrest gump contrasting jean luc godard with steven spielberg defending david lynch against aesthetic ideologues invoking the curse of the mekons against fredric jameson s postmodernism and introducing d h lawrence to buffy the vampire slayer we are born in flames sang the incandescent lora logic and here those flames are a source of illumination as well as destruction warmth as well as consumption from the scorched earth works of action movie provocateurs seijun suzuki and sam peckinpah to the cargo cult soundscapes of pere ubu and the czech dissidents plastic people of the universe born in flames is a headlong plunge into the passions and disruptive power of art

this book provides an introduction to band theory and the electronic properties of materials at a level suitable for final year undergraduates or first year graduate students it sets out to provide the vocabulary and quantum mechanical training necessary to understand the electronic optical and structural properties of the materials met in science and technology and describes some of the experimental techniques which are used to study band structure today in order to leave space for recent developments the drude model and the introduction of quantum statistics are treated synoptically however bloch's theorem and two tractable limits a very weak periodic potential and the tight binding model are developed rigorously and in three dimensions having introduced the ideas of bands effective masses and holes semiconductor and metals are treated in some detail along with the newer ideas of artificial structures such as super lattices and quantum wells layered organic substances and oxides some recent hot topics in research are covered e.g. the fractional quantum hall effect and nano devices which can be understood using the techniques developed in the book in illustrating examples of e.g. the de haas van alphen effect the book focuses on recent experimental data showing that the field is a vibrant and exciting one references to many recent review articles are provided so that the student can conduct research into a chosen topic at a deeper level several appendices treating topics such as phonons and crystal structure make the book self contained introduction to the fundamentals of band theory and electronic properties in condensed matter physics today
