react is a remarkable javascript library that taken the development community by storm in a nutshell it s made it easier for developers to build interactive user interfaces for web mobile and desktop platforms one of its best features is its freedom from the problematic bugs inherent in mvc frameworks where inconsistent views is a recurring problem for big projects today thousands of companies worldwide are using react including big names such as netflix and airbnb react has become immensely popular such that a number of apps have been ported to react including whatsapp instagram and dropbox this book is a collection of tutorials selected from sitepoint s react hub that will guide you through your first days with the amazingly flexible library

this book is closely related to the energy conservation problem of rail transport systems focusing on reducing the energy consumption of train operation the system process of train operation is analyzed and the relationship between train operation and energy consumption is introduced the fundamental theories modelling and application of technologies for energy efficient train driving are presented discussing timely topics such as energy efficient train control and timetabling integrated timetabling and regenerative braking and maximizing regenerated energy usage with energy storage systems in addition the modelling and application of a traction power simulation platform is introduced to calculate the detailed energy flow over a railway network the book is enriched with a set of practical examples to illustrate the performance of the proposed methods in improving energy efficiency of both urban and long distance trains overall the book provides a timely guide to professionals in the railway industry and to researchers and graduate students in transport electrical and control engineering
