The World Price of Foreign Exchange Risk 1993 we consider a world capital market in which the investor population is heterogenous investors of different countries differ in the prices of goods at which they consume the income from their investments in such a setting the international capm incorporates rewards for exchange rate risk in addition to the traditional reward for market covariance risk the aim of the paper is to determine whether these additional risk premia empirically playa significant role in the pricing of securities the test being conducted is a test of a conditional version of the capm it builds on the recent empirical literature which points out that stock market returns may to some extent be predicted on the basis of a number of instrumental variables such as interest rates and dividend yields all previous tests of the international capm with exchange risk premia have been tests of the unconditional version and have been inconclusive

An Intraday Pricing Model of Foreign Exchange Markets 2003-06 market makers learn about asset values as they set intraday prices and absorb portfolio flows absorbing these flows causes inventory imbalances previous work has argued that market makers change prices to manage incoming flows and offset inventory imbalances this study argues that they have multiple instruments or ways to manage inventory imbalances and learn about evolving asset values hence they smooth inventory levels and update prior information

about assets using multiple instruments in ignoring other instruments previous studies have ignored the information that these provide and overemphasize the role of price changes in inventory management the model presented here provides new estimates of asymmetric information and inventory effects the price impact of each instrument the cost of liquidity and the impact of an intervention on these costs

To Enable the United States to Participate in the Work of the United Nations Relief and Rehabilitation Administration. Hearings ... on H.J. Res. 192... Dec 7,8,9,10,15,16,17, 1943 and Jan. 11, 1944 1944 this pamphlet reviews the exchange regimes of five emerging market countries in the region egypt jordan lebanon morocco and tunisia and an oil exporting country iran to see whether they need to consider adopting more flexible arrangements as they further open their economies to trade and capital flows in fact two countries egypt and iran have recently adopted flexible exchange rate arrangements but their experience is too recent to warrant meaningful conclusions the pamphlet highlights the criteria for an exchange regime choice presents a country by country assessment of existing exchange regimes explores options for the future based on the forward looking analysis of reform prospects in each country raises the issue of a nominal anchor for countries with floating exchange rates and considers the pros and cons of monetary aggregate and inflation targeting as policy anchors the pamphlet looks at the recent move by egypt and iran toward more flexible exchange rate regimes and discusses the required steps to ensure the success of these experiences for the other countries the choice is less clear cut and more of a long term nature in either case transition to a more flexible exchange rate arrangement raises the question of what conditions countries would need to meet if they opted for greater flexibility including changes to their monetary policy framework

International Financial Statistics, May 2015 2015-04-29 we investigate the choice of exchange rate regime fixed or floating in a dynamic intertemporal general equilibrium framework our framework extends

devereux and engel 1998 by investigating the implications of internationalized production we examine the role of price setting whether prices are set in the currency of producers or the currency of consumers in determining the optimality of exchange rate regimes in an environment of uncertainty created by monetary shocks we find that when prices are set in producers currencies floating exchange rates are preferred when the country is large enough or not too risk averse on the other hand floating exchange rates are always preferred when prices are set in consumers currencies because floating exchange rates allow domestic consumption to be insulated from foreign monetary shocks the gains from floating exchange rates are greater when there is internationalized production in this case
