the 4th international conference on hybrid artificial intelligence systems hais 2009 as the name suggests attracted researchers who are involved in developing and applying symbolic and sub symbolic techniques aimed at the construction of highly robust and reliable problem solving techniques and bringing the most relevant achievements in this field hybrid intelligent systems have become increasingly popular given their capabilities to handle a broad spectrum of real world complex problems which come with inherent imprecision uncertainty and vagueness high dimensionality and nonstationarity these systems provide us with the opportunity to exploit existing domain knowledge as well as raw data to come up with promising solutions in an effective manner being truly multidisciplinary the series of hais conferences offers an interesting research forum to present and discuss the latest theoretical advances and real world applications in this exciting research field this volume of lecture notes in artificial intelligence lnai includes accepted

papers presented at hais 2009 held at the university of salamanca salamanca spain june 2009 since its inception the main aim of the hais conferences has been to establish a broad and interdisciplinary forum for hybrid artificial intelligence systems and asso ated learning paradigms which are playing increasingly important roles in a large number of application areas

Hybrid Artificial Intelligence Systems

2010-09-27

ever since their invention in 1960 lasers have assumed tremendous importance in the fields of science engineering and technology because of their use both in basic research and in various technological applications lasers theory and applications 2nd edition will provide a coherent presentation of the basic physics behind the working of the laser along with some of their most important applications numerical examples are scattered throughout the book for helping the student gain a better appreciation of the concepts and problems at the end of each chapter and provides the student a better understanding of the basics and help in applying the concepts to practical situations this book serves as a text in a course on lasers and their applications for students majoring in various disciplines such as physics chemistry and electrical engineering

Lasers

2018-04-18

this monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of theoretical insights but also by the approach based on employees and managers why was the term management culture that is rarely found in literature selected for the analysis we are quite often faced with problems of terminology especially it often happens in the translation from one language to another while preparing this monograph the authors had a number of questions on how to decouple the management culture from organization s culture and from organizational culture how to separate management culture from managerial culture etc however having analysed a variety of scientific research it appeared that there is no need to break down the mentioned cultures because they still overlap therefore it is impossible

to completely separate the management culture from the formal or informal part of organizational culture management culture inevitably exists in every organization only its level of development may vary

Management Culture and Corporate Social Responsibility

2006-08-11

this book constitutes the refereed proceedings of the 5th international conference on natural language processing fintal 2006 held in turku finland in august 2006 the book presents 72 revised full papers together with 1 invited talk and the extended abstracts of 2 invited keynote addresses the papers address all current issues in computational linguistics and monolingual and multilingual intelligent language processing theory methods and applications

Advances in Natural Language Processing

2013-03-08

the cooperation test apt francez de roever was originally conceived to capture the proof theoretical analogue of distributed message exchange between disjoint processes as opposed to the interference freedom test owicki gries being the proof theoretical analogue of concurrent communication by means of interference through jointly shared variables some authors levin gries lamport schneider schlichting and schneider stress that both forms of communication can be proof theoretically characterized using interference freedom only since proofs for both ultimately amount to an invariance proof of a big global assertion ashcroft invariance of whose parts amounts to interference freedom yet i feel that the characteristic nature of the cooperation test is still preserved in the analysis of these authors because in their analysis of csp the part dealing with interference freedom specializes to maintenance of a global invariant the expression of which requires per process the introduction of auxiliary variables which are updated in that process only thus preserving the concept of disjointness as opposed to sharing since now all variables from different processes are disjoint the cooperation test has been applied to characterize concurrent communication as occurring in hoare s communicating sequential processes

csp hoare 2 ichbiah s ada arm and brinch hansen s distributed processes dp brinch hansen this characterization has been certified through soundness and completeness proofs apt 2 gerth as in the interference freedom test this characterization consists of two stages a local sequential stage and a global stage

Logics and Models of Concurrent Systems

visiting the local church is said to be a powerful case of participatory learning inside the church the students have an actual multi sensory encounter with christian practice moreover leaving the classroom to visit some artifact nearby is attractive and is said to raise the situational interest of the students an empirical study on the effects of such field trips however is still missing this volume addresses this research gap in religious education it provides insight into the theoretical background the empirical design and the results of a project about field trips to the local church in compulsory catholic religious education in german primary schools it draws a comprehensive picture of such effects by identifying the benefits of scholastic field trips as well as the obstacles of this didactic set up the volume closes with a description of didactic principles and methods which help to improve scholastic field trips to the local church ulrich riegel ist professor für religionspädagogik am seminar für katholische theologie der universität siegen

Field Trips to the Church

2012-12-06

this volume contains the lectures presented at the nato advanced study institute on frontiers of laser spectroscopy of gases held in the hotel golf mar vimeiro near torres vedras portugal from 30 march to 10 april 1987 the objective of the meeting was to take stock of the recent technological developments involving lasers and to assess their impact on spectroscopy the whole range of wavelengths from the far infrared through to the extreme ultraviolet was covered in addition specific applications to both atoms and molecules were described indeed one of the most successful and pleasant aspects of the institute was the joint participation of atomic physicists and molecular spectroscopists who meet all too rarely these days the institute also succeeded in covering a wide time span from the very earliest days of lasers to some of the very latest developments in both lasers and their applications to spectroscopy there were 14 invited lecturers giving a total of 40 lectures and 89 other participants at the institute each of the invited lecturers has contributed a chapter to this volume in addition on thursday 2nd april a special one day session was held in the chemistry department at the university of coimbra to mark the retirement of professor dr f

Frontiers of Laser Spectroscopy of Gases

2006

this book on lasers is the culmination of several years of relentless personal research exhaustive literature survey critical analysis of all the facets of the subject and interactions with the subject experts and students in india and abroad by the author this book has been very systematically structured and organised the subject has been divided into three parts part a deals with all the established principles and theories of laser science prefixed with a journey through the relevant areas of optics and modern physics part b presents a galaxy of all the available laser schemes of the day with a peep into the future part c deals with the myriads of applications of this wonder beam in every walk of life while giving an exhaustive account about lasers the book also covers all the relevant aspects of related subjects such as fibre optics

holography laser safety etc apart from the excellent presentation of the topics as they unfold this book contains a rich fund of worked out examples and student exercises with answers the language is simple and reader friendly the treatise logical and even the intricate mathematical derivations and clear and lucid this book is meant to be a very valuable guide to students at graduate and postgraduate levels and to those working or intending to work in the field of lasers to add to what they already know this is perhaps the only book at present on lasers by an indian author with such a vast coverage of the subject itself and the associated disciplines

Lasers:Principles, Types and Applications

2008

this volume constitutes the refereed proceedings of ten international workshops otm academy industry case studies program ei2n inbast meta4es ontocontent orm sedes sincom and somoco 2012 held as part of otm 2012 in rome italy in september 2012 the 66 revised full papers presented were carefully reviewed and selected from a total of 127 submissions the volume also includes 7 papers from the on the move academy otma 2012 as well as 4 coopis 2012 poster papers and 5 odbase 2012 poster papers the paper cover various aspects of computer supported cooperative work cscw middleware internet data management electronic commerce enterprise modelling workflow management knowledge flow agent technologies information retrieval software architectures service oriented computing and cloud computing

On the Move to Meaningful Internet Systems: OTM 2012 Workshops

2018-01-17

this book fills a gap between many of the basic solid state physics and materials sciencebooks

that are currently available it is written for a mixed audience of electrical engineering and applied physics students who have some knowledge of elementary undergraduate quantum mechanics and statistical mechanics this book based on a successful course taught at mit is divided pedagogically into three parts i electronic structure ii transport properties and iii optical properties each topic is explained in the context of bulk materials and then extended to low dimensional materials where applicable problem sets review the content of each chapter to help students to understand the material described in each of the chapters more deeply and to prepare them to master the next chapters
