this project is posthumously dedicated to dr gregory dana bossart whether you knew him as colleague mentor friend family member or simply knew of him you could not help but be awestruck by his dedication intelligence thoughtfulness work ethic and passion for scientific inquiry especially for conservation of the marine environment many of his publications were seminal in marine mammal health including infectious environmental and zoonotic diseases as we collected manuscripts for this special frontiers edition it was heartwarming to hear the comments from contributors so many research scientists field biologists and veterinarians could easily have given up and said i just can t do this now especially with the added challenges posed by the current covid 19 pandemic instead contributors from around the world were determined to contribute to this collection because of their inspiration and shared commitment with greg s vision the love and admiration within the marine community for greg is phenomenal with that said we would be remiss if we did not say a few words about greg as a mentor and friend greg had a knack for helping students realize their abilities and pursue their own independent contributions to the marine mammal community he shared in their successes and worked tirelessly to facilitate their aspirations greg would involve students early career scientists and colleagues in projects introduce them to collaborators and promote them and their work greg was a genuinely caring person when he asked you how are you doing he honestly wanted to know he was always there ready to listen and provide guidance if you were to ask greg what was most important to him in life he would say god family and marine life and one could argue that he had a special fondness for manatees he believed in the beauty of nature and that god had a hand in all of it he was in pursuit of ensuring that we all share this earth responsibly and sustainably we miss greg dearly but honor and celebrate him as we carry on in our pursuits

recent advances in computational algorithms along with the advent of whole slide imaging as a platform for embedding artificial intelligence ai are transforming pattern recognition and image interpretation for diagnosis and prognosis yet most pathologists have just a passing knowledge of data mining machine learning and ai and little exposure to the vast potential of these powerful new tools for medicine in general and pathology in particular in artificial intelligence and deep learning in pathology dr stanley cohen covers the nuts and bolts of all aspects of machine learning up to and including ai bringing familiarity and understanding to pathologists at all levels of experience focuses heavily on applications in medicine especially pathology making unfamiliar

material accessible and avoiding complex mathematics whenever possible covers digital pathology as a platform for primary diagnosis and augmentation via deep learning whole slide imaging for 2d and 3d analysis and general principles of image analysis and deep learning discusses and explains recent accomplishments such as algorithms used to diagnose skin cancer from photographs ai based platforms developed to identify lesions of the retina using computer vision to interpret electrocardiograms identifying mitoses in cancer using learning algorithms vs signal processing algorithms and many more
