Rapid Review of Chemistry for the Life Sciences and Engineering

2021-12-07

designed to demystify chemistry for the non chemist rapid review of chemistry for the life sciences and engineering is a useful reference manual for life scientists and engineers who may have forgotten a formula principle or concept in the college chemistry taken a few years ago with over 100 solved examples from balancing chemical reactions doing stoichiometry and understanding nomenclature rules in both organic and inorganic chemistry to calculating half lives in kinetics or radioactive decay schemes understanding colligative properties of solutions and interpreting toxicities of hazardous materials this book is intended to make reviewing and understanding chemistry much clearer and easier relevant diagrams are in color and solved examples are organized by subject topic and cross referenced by page and chapter number it may also serve as a concise go to sidekick for students who are not chemistry majors taking chemistry at the college level and having difficulty understanding the scope focus language or equations in their chemistry textbook armed with select contemporary applications it is written in the hope to bridge a gap between chemists and non chemists so that they may communicate with and understand each other chapters 1 10 are designed to contain the standard material in an introductory college chemistry course chapters 11 15 present applications of chemistry that should interest and appeal to scientists and engineers engaged in a variety of fields additional features more than 100 solved examples clearly illustrated and explained with si units and conversion to other units using conversion tables included assists the reader to understand organic and inorganic compounds along with their structures including isomers enantiomers and congeners of organic compounds provides a quick and easy access to basic chemical concepts and specific examples of solved problems ideal sidekick for students who are non chemistry majors taking intro college chemistry needing clear concise explanations this concise user friendly review of general and organic chemistry with environmental applications will be of interest to all disciplines and backgrounds

Reviews in Computational Chemistry, Volume 11

2009-09-22

volume 11 reviews in computational chemistry kenny b lipkowitz and donald b boyd the theme of this eleventh volume is computer aided ligand design and modeling of biomolecules a stellar group of scientists from around the world join in this volume to provide tutorials for beginners and experts chapters 1 and 2 take a detailed look at de novo design methodologies for discovering new ligands which may become pharmaceuticals chapters 3 and 4 cover the methods and applications of three dimensional quantitative structure activity relationships 3d qsar currently used in drug discovery ways to compute the correct lipophilic hydrophilic behavior of molecules are taught in chapter 5 chapter 6 is an exposition of realistically simulating dna in the complex milieu of ions that surround it an appendix to this volume gives a compendium of software and internet tools for computational chemistry from reviews of the series this well respected series continues the fine selection of topics and presentation qualities set forth by the previous members for example each chapter contains thorough treatment of the theory behind the topic being covered moreover the background material is followed by ample timely examples culled from recent literature journal of medicinal chemistry

this volume of progress in heterocyclic chemistry phc is the eleventh annual review of the literature covering the work published on most of the important heterocyclic ring systems during 1998 with inclusions of earlier materials as appropriate in addition this year there are three specialized reviews martine demeunynck and arnaud tatiboueu ml t present recent chemistry of trouml ger s base in chapter 1 pedro merino reviews the reactions of metalated heterocycles with carbonyl compounds in chapter 2 john joule summarizes the remarkable nucleophilic substitution chemistry on the indole five membered ring in chapter 3 the subsequent chapters deal with recent advances in the field of heterocyclic chemistry arranged by increasing ring size and with emphasis on synthesis and reactions due to the ever increasing amount of material to be surveyed the authors were encouraged to provide selective and critical reviews of the more significant papers where space does not allow comprehensive coverage
