Implementing e-Navigation 2017-08-31

this one of a kind new resource written by an expert in the field provides a comprehensive introduction to global e navigation this book presents the vision development and objectives of this strategy to increase awareness safety and security in the navigation of commercial shipping current equipment and practices of maritime navigation are discussed including ship reporting shore based services communications and challenges in vessel travel services vts and port areas this book identifies performance gaps and demonstrates how to identify user needs as well as solutions through gap analysis e navigation architectures solutions and standards are explored readers find useful insight into how new concepts of e navigation are being adapted internationally and some of the difficulties that will need to be overcome this resource focuses on the use of e navigation in security cyber security environmental protection communications and global and technical standardization navigation equipment systems displays bridge systems and other current equipment and practices are explored in this book readers get a look into the future of e navigation including the impact that digital globalization unmanned ships and big data will have on this strategy

E - NAVIGATION BASICS *2023-11-21*

at first glance there seems to be a fragmented nature of the maritime digital solution market yet after reading this book the big picture becomes clear and everything is put into the right context over the last decades and after numerous projects committee work and industry initiatives all described in this book the contours of e navigation eventually distilled to a clear structure on one hand the e navigation framework provides reliable guidance but on the other hand leaves sufficient flexibility for further technological and also procedural advancements realisations of e navigation are in use already being closely linked e g with modern integrated ship bridges the layout of information on navigational screens maritime single windows port call optimisation platforms even the entire multi modal transport chain next to the initiatives is europe special attention is given to the enormous e navigation project in the republic of korea targeted to facilitate the country s transition from a ship building nation to a leader in the maritime digital world the book not only take s an actual summary of the e navigation development but also highlights benefits and opportunities for various stakeholders the target group includes those operating the ships at sea and at port business prime movers formative maritime authorities and researchers

the transnav 2011 symposium held at the gdynia maritime university poland in june 2011 has brought together a wide range of participants from all over the world the program has offered a variety of contributions allowing to look at many aspects of the navigational safety from various different points of view topics presented and discussed at th

Modern Transport Telematics *2011-10-06*

this book constitutes the proceedings of the 11th international conference on transport systems telematics tst 2011 held in katowice ustron poland in october 2011 the 47 papers included in this volume were carefully reviewed and selected for inclusion in this book transport telematics systems are

information technologies that are used in the field of transport including infrastructure vehicles and users intelligent transport systems are advanced applications that are to provide innovative services for the various modes of transport and traffic management also they should enable users to be better informed and make safer more coordinated and smarter use of transport networks telematic services integrate telecommunications electronics and information technology in transport engineering in order to plan design operate maintain and manage transport systems

E-Commerce and Intelligent Methods *2002-08-06*

this book covers significant recent developments in the field of intelligent meth ods applied to ecommerce the intelligent methods considered are mainly soft computing methods that include fuzzy sets rough sets neural networks evolutionary computations probabilistic and evidential reasoning multivalued logic and related fields there is not doubt about the relevance of ecommerce in our daily environ ments and in the work carried out at many research centers throughout the world the application of ai to commerce is growing as fast as the computers and net works are being integrated in all business and commerce aspects we felt that it was time to sit down and see how was the impact into that field of low level ai i e softcomputing we found many scattered contributions disseminated in con ferences workshops journal books or even technical reports but nothing like a common framework that could serve as a basis for further research comparison or even prototyping for a direct transfer to the industry we felt then the need to set up a reference point a book like this we planned this book as a recompilation of the newest developments of re searchers who already made some contribution into the field the authors were se lected based on the originality and quality of their work and its relevance to the field authors came from prestigious universities and research centers with differ ent backgrounds
