professor aronnax early in this novel what goes on in those distant depths what creatures inhabit or could inhabit those regions twelve or fifteen miles beneath the surface of the water it s almost beyond conjecture jules verne 1828 1905 published the french equivalents of these words in 1869 and little has changed since 126 years later a time cover story on deep sea exploration made much the same admission we know more about mars than we know about the oceans this reality begins to explain the dark power and otherworldly fascination of twenty thousand leagues under the seas born in the french river town of nantes verne had a lifelong passion for the sea first as a paris stockbroker later as a celebrated author and yachtsman he went on frequent voyages to britain america the mediterranean but the specific stimulus for this novel was an 1865 fan letter from a fellow writer madame george sand she praised verne s two early novels five weeks in a balloon 1863 and journey to the center of the earth 1864 then added soon i hope you ll take us into the ocean depths your characters traveling in diving equipment perfected by your science and your imagination thus inspired verne created one of literature s great rebels a freedom fighter who plunged beneath the waves to wage a unique form of guerilla warfare initially verne s narrative was influenced by the 1863 uprising of poland against tsarist russia the poles were quashed with a violence that appalled not only verne but all europe as originally conceived verne s captain nemo was a polish nobleman whose entire family had been slaughtered by russian troops nemo builds a fabulous futuristic submarine the nautilus then conducts an underwater campaign of vengeance against his imperialist oppressor but in the 1860s france had to treat the tsar as an ally and verne s publisher pierre hetzel pronounced the book unprintable verne reworked its political content devising new nationalities for nemo and his great enemy information revealed only in a later novel the mysterious island 1875 in the present work nemo s background remains a dark secret in all the novel had a difficult gestation verne and hetzel were in constant conflict and the book went through multiple drafts struggles reflected in its several working titles over the period 1865 69 early on it was variously called voyage under the waters twenty five thousand leagues under the waters twenty thousand leagues under the waters and a thousand leagues under the oceans verne is often dubbed in isaac asimov s phrase the world s first science fiction writer and it s true many of his sixty odd books do anticipate future events and technologies from the earth to the moon 1865 and hector servadac 1877 deal in space travel while journey to the center of the earth features travel to the earth s core but with verne the operative word is travel and some of his best known titles don t really qualify as sci fi around the world in eighty days 1872 and michael strogoff 1876 are closer to travelogues adventure yarns in far away places these observations partly

apply here the subtitle of the present book is an underwater tour of the world so in good travelog style the nautilus exploits supply an episodic story line shark attacks giant squid cannibals hurricanes whale hunts and other rip roaring adventures erupt almost at random yet this loose structure gives the novel an air of documentary realism what's more verne adds backbone to the action by developing three recurring motifs the deepening mystery of nemo's past life and future intentions the mounting tension between nemo and hot tempered harpooner ned land and ned's ongoing schemes to escape from the nautilus these unifying threads tighten the narrative and accelerate its momentum other subtleties occur inside each episode the textures sparkling with wit information and insight verne regards the sea from many angles in the domain of marine biology he gives us thumbnail sketches of fish seashells coral sometimes in great catalogs that swirl past like musical cascades in the realm of geology he studies volcanoes literally inside and out in the world of commerce he celebrates the high energy entrepreneurs who lay the atlantic cable or dig the sues canal and verne's marine engineering proves especially authoritative his specifications for an open sea submarine and a self contained diving suit were decades before their time yet modern technology bears them out triumphantly true today's scientists know a few things he didn't the south pole isn't at the water's edge but far inland sharks don't flip over before attacking giant squid sport ten tentacles not eight sperm whales don't prey on their whalebone cousins this notwithstanding verne furnishes the most evocative portrayal of the ocean depths before the arrival of jacques cousteau and technicolor film lastly the book has stature as a novel of character even the supporting cast is shrewdly drawn professor aronnax the career scientist caught in an ethical conflict conseil the compulsive classifier who supplies humorous tag lines for verne's fast facts the harpooner ned land a creature of constant appetites man as heroic animal but much of the novel's brooding power comes from captain nemo inventor musician renaissance genius he's a trail blazing creation the prototype not only for countless renegade scientists in popular fiction but even for such varied figures as sherlock holmes or wolf larsen however verne gives his hero's brilliance and benevolence a dark underside the man's obsessive hate for his old enemy this compulsion leads nemo into ugly contradictions he's a fighter for freedom yet all who board his ship are imprisoned there for good he works to save lives both human and animal yet he himself creates a holocaust he detests imperialism yet he lays personal claim to the south pole and in this last action he falls into the classic sin of pride he's swiftly punished the nautilus nearly perishes in the antarctic and nemo sinks into a growing depression like shakespeare's king lear he courts death and madness in a great storm then commits mass murder collapses in catatonic

understanding the dimensions and mechanics of the bible is far crucial in understanding of the bible itself fresh and new revelations will be like links on the chain when you read the bible from cover to cover with this very nature in mind bible is no different to the concept of a jigsaw puzzle all the individual 66 books and epistles that sum up the bible are incomplete in its individuality you can find that missing jigsaw piece nowhere but within the vicinity of the bible itself for instance genesis without the other 65 books and epistles is incomplete and so forth oracles in the bible are scattered and blended with other testimonial experience so that an ordinary mind will look but shall not see and listen but cannot hear the pharisees high priests and the jewish authorities opposed and rejected jesus for their lack of awareness about the dynamics of the bible you are very blessed for discovering this golden secret about the divinity of the bible moreover the bible is an encyclopedia of its own having answers to its own questions and all the questions mankind can ever think of in other words bible itself is the absolute and divine meaning of completion lacking nothing in it is fullness of life health wealth prosperity authority and power without lack of any kind for it is a piece of god s mind and heart constrained to mankind s calling and thinking cap in god is fullness of life so shall be it for his inspired book of all times the holy bible
