botanists students and others interested in the flora of alberta excerpt from colouration in animals and plants this little book is only a sketch of what its author desired it to be and he never saw the completed manuscript beginning with the fundamental idea that decoration is based upon structure he saw that this was due to the fact that in the lower transparent animals colour is applied directly to the organs and that the decoration of opaque animals is carried out on the same principle the primitive idea being maintained where function changes the pattern alters where function is localized colour is concentrated and thus the law of emphasis was evolved symmetry was a necessary consequence for like parts were decorated alike and this symmetry was carried out in detail apparently for the sake of beauty as in the spiracular markings of many larvae hence the reason for recognizing the law of repetition with the developing of these ideas the necessity for recognizing some sort of consciousness even in the lowest forms of life was forced upon the author until inherited memory formed part of his scientific faith this he saw dimly years ago but only clearly when mr s butler s remarkable life and habit appeared and he was gratified and strengthened when he found mr romanos adopting that theory in his mental evolution the opening chapters are designedly elementary for the author had a wise dread of locking intellectual treasures in those unpickable scientific safes of which the learned alone hold keys about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works combines information on both living creatures and the earth itself and explains their fragile existence cd rom contains two series of map each of which consists of 5 maps corresponding to groups of counties located along different segments of the minnesota river the first series depicts all the sites surveyed by mcgs ranking according to statewide significance for biological diversity the cd also contains a full color version of the report the variation of animals and plants under domestication vol ii is an unchanged high quality reprint of the original edition of 1894 hansebooks is editor of the literature on different topic areas such as research and science travel and expeditions cooking and nutrition medicine and other genres as a publisher we focus on the preservation of historical literature many works of historical writers and scientists are available today as antiques only hansebooks newly publishes these books and contributes to the preservation of literature which has become rare and historical knowledge for the future

as the title indicates the theme of this book is the functions of biochromes in animals recent works on zoochromes such as those of d l fox 1953 h m fox and vevers 1960 and vuillaume 1969 have been concerned primarily with the chemical nature and the taxonomic distribution of these materials and although function has been considered where relevant this has not been the centre of interest and certainly not the basis for the arrangement of the subject matter functional significance is a profitable focus of interest since it is the one theme which can make biochromatology a discrete and integral subject and because it is the main interest in all biological fields at present chromatology seems to be a particularly schizoid subject since it is clear that in metabolic functions biochromes are acting in a chemical capacity whereas integumental pigments function mainly biophysically in neurological and behavioural contexts it is profitable to attempt an integration by studying the functions of as many chromes as possible from all aspects

excerpt from colouration in animals and plants this little book is only a sketch of what its author desired it to be and he never saw the completed manuscript beginning with the fundamental idea that decoration is based upon structure he saw that this was due to the fact that in the lower transparent animals colour is applied directly to the organs and that the decoration of opaque animals is carried out on the same principle the primitive idea being maintained where function changes the pattern alters where function is localized colour is

concentrated and thus the law of emphasis was evolved symmetry was a necessary consequence for like parts were decorated alike and this symmetry was carried out in detail apparently for the sake of beauty as in the spiracular markings of many larvae hence the reason for recognizing the law of repetition with the developing of these ideas the necessity for recognizing some sort of consciousness even in the lowest forms of life was forced upon the author until inherited memory formed part of his scientific faith this he saw dimly years ago but only clearly when mr s butler s remarkable life and habit appeared and he was gratified and strengthened when he found mr romanes adopting that theory in his mental evolution the opening chapters are designedly elementary for the author had a wise dread of locking intellectual treasures in those unpickable scientific safes of which the learned alone hold keys about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
